Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

The Justice Dept. and FTC took strong exception to Microsoft's control of computer usage via their Windows systems. Microsoft was made to open their system to other developers of browsers, worksheets, etc.

The same logic must apply here, too.

Do not let a monopoly "monopolize" a process, or certain systems. There must be open competition - or don't the Republicans really like Capitalism, unless they can control who benefits?

Sincerely,

William Drake

Dear Federal Communications Commission,

dear Peter,

This is something that I feel strongly about, that the airwaves are public property and should be used in a way that benefits the people. It's especially important in this day and age, when new innovations happen almost daily, that there should be spectrum available to use with them. Imagine, if you will, a spectacular new innovation becoming available, and we find that there is no way to use it, because all of the big corporations have a lock on the frequencies that we need. so the iphone is just the first step of what is likely to be many.

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

Dear Federal Communications Commission,

The Telecom polices since soon after the 1996 Telecom act has failed. Allowing AT&T and the other Baby Bells to merge back into an oligopoly has stopped innovation and has made the US a Third World telecom country.

The failure of these policies is accelerating this move backwards. I live in Silicon Valley and can NOT get any consumer broadband. No DSL and no Cable modem service. And they won't even give a hint when they will add this service.

When you guys allowed SBC to merge with Ameritech and Pacific Bell, they promised to extend DSL every where with Project Pronto. Well, it still hasn't come to my town in Silicon Valley.

Now you want to steal the citizen's spectrum AGAIN and give it to corporate oligopolists.
ENOUGH

Its time for the Bells and the CableCos to be broken up. This time Horizontally not vertically.

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

Commissioner Robert McDowell

Dear Commissioner McDowell,

The airwaves belong to the public, not corporations like Verizon and AT&T whose anti-competitive practices have resulted in the U.S. falling to 16th in the world in high-speed Internet rankings.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

Dear Federal Communications Commission,

Our generation has a strong need towards the quality of communication and cellular phones such as the iPhone are a crucial step to increasing communication by letting the citizens of the United States communicate anywhere in the world to one another in case trouble strikes.

I ask you to support open standards to all phones. We simply can't allow a few companies to control this market. We need communication to communicate with ourselves and the world. Consumers need to have the right to decide what to do with our Cell Phones and how to communicate.

The iPhone not only is an important part as the US grows in communication, has set the stage for the future of mobile Internet. However bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet
-- but bad policies allow companies like AT&T and Verizon to
shackle great gadgets to their closed networks.

I don't believe that corporations which impose draconian
limitations like these have any reasonable expectation to avoid
government regulation. Government has an important role to play
by protecting the rights of citizens from the unreasonable
practices of large corporations.

To free wireless Internet, the FCC and Congress must use the
700MHz spectrum auction to create an open network that gives
consumers:

1. The freedom to use whatever device we want on any network.

The airwaves belong to the public, not corporations like Verizon and AT&T whose anti-competitive practices have resulted in the U.S. falling to 16th in the world in high-speed Internet rankings.

To restore America's leadership in high speed Internet services, the FCC must ensure that the upcoming auction sets aside at least 30 MHz of spectrum for open and non-discriminatory Internet access. This will guarantee that new entrants have the opportunity to enter the market in competition with incumbent providers.

It would be a big mistake to hand over these airwaves to the very same phone and cable companies that dominate the wireline market. We need more competition and innovation, not more of the same. This new wireless spectrum must be open and neutral so that America can build a better Internet for everyone.

Sincerely,
Albert Samuelson
